

# RONNY ROETHOF

## PROFILE

Principal Infrastructure & Security Engineer with 25+ years of experience designing, building, securing, and modernizing complex IT infrastructures. Specialized in open source, high availability, infrastructure automation, security, platform architecture, and operational resilience. Experienced in architecture, engineering, security, consultancy, and leadership roles within business-critical and large-scale environments. Combines strategic technical vision with deep hands-on experience and focuses on reliable, secure, scalable, and vendor-independent infrastructure.

## EXPERIENCE

### SPIE Data Solutions B.V.

Den Bosch, The Netherlands

Sep 2025 – Present

#### EXPERT IN OPEN SOURCE, SECURITY & HIGH AVAILABILITY

Business Unit Security Officer within SPIE Data Solutions and the technical conscience of the business unit. Responsible for security governance and risk management at business-unit level, alongside broad technical responsibility for infrastructure, security, open source, high availability, and architecture.

- Acts as Business Unit Security Officer, fulfilling the CISO responsibility at business-unit level.
- Advises management and teams on security strategy, risks, and information security.
- Acts as the technical conscience for complex infrastructure, security, and architecture challenges.
- Advises on open-source, vendor-independent, and high-availability solutions.
- Assesses technical designs and solutions for security, reliability, manageability, and long-term impact.
- Connects security governance with hands-on infrastructure engineering and technical architecture.

Lead Platform Architect Business Unit Security Officer ISO27001 ISO27002 NIS2 Proxmox High Availability Open Source GDPR Fortigate

### AnyLinQ B.V.

Den Bosch, The Netherlands

Jun 2022 – Sep 2025

#### CISO / SECURITY OFFICER / DEVOPS ENGINEER / INTERNAL IT

Ultimately responsible for information security, security governance, and internal IT infrastructure. Combined security leadership with hands-on engineering, infrastructure architecture, DevOps, and risk-based security.

- Developed and implemented security policies, technical security measures, and governance.
- Ensured compliance with ISO 27001 / 27002, NIS2, and privacy requirements in processes and technical infrastructure.
- Designed and managed secure and reliable IT infrastructure, including virtualization, networking, and cloud.
- Combined security governance with hands-on infrastructure engineering and automation.
- Performed security assessments and pentests and translated findings into concrete technical improvements.

VMware Proxmox Debian CentOS FreeBSD Windows Server Azure Ansible Huawei Fortigate GDPR ISO27001 ISO27002 NIS2

### SECURITY CONSULTANT / PENTESTER

Nov 2021 – Jun 2022

Performed pentests on websites, infrastructures, and applications, resulting in secure client environments.

- Performed blackbox, graybox, and whitebox tests.
- Improved security levels for clients.
- Prepared advisory reports following security assessments.

Kali Linux Debian Ubuntu VMware Cisco Juniper Huawei Fortigate

### RIVM / KNMI (Seconded via AnyLinQ B.V.)

Bilthoven, The Netherlands

Oct 2020 – Nov 2021

#### AREA PRODUCT OWNER / TEAM LEAD / SENIOR DEVOPS ENGINEER

Led the Specific Hosting Team and was technically responsible for business-critical infrastructure for RIVM.nl and KNMI.nl. Also acted as lead developer for the infrastructure of the COVID-19 registration system and the National Vaccination Programme, with a focus on automation, scalability, and continuity.

- Technically led a specialized hosting team and helped determine the technical direction.
- Designed and implemented Infrastructure-as-Code and High Availability architectures using Puppet and Ansible.
- Automated provisioning, testing, and deployments through CI/CD.
- Designed and built the infrastructure for the COVID-19 registration system and National Vaccination Programme.
- Developed automation that enabled infrastructure to be scaled quickly and reproducibly.
- Ensured continuity and delivery speed under exceptional time and operational pressure.

## SKILLS

### Architecture & Infrastructure

#### Engineering:

High Availability,  
Infrastructure Architecture,  
Infrastructure Automation,  
Infrastructure as Code,  
Disaster Recovery, Virtualization,  
Open Source Infrastructure

### Automation & Configuration

#### Management:

Ansible, Puppet, Kickstart

### Security:

Infrastructure Security, PKI,  
Data Encryption, Firewalls,  
Pen testing, ISO 27001, ISO 27002,  
NIS2

### Operating Systems:

Linux, Debian, FreeBSD,  
Red Hat Enterprise Linux (RHEL),  
Ubuntu, Arch, Unix, Windows Server

### Virtualization & Cloud:

VMware, KVM, Proxmox, Xen,  
Hyper-V, Docker, Azure,  
Amazon AWS

### Programming Languages &

#### Scripting:

Bash, Python, PHP

### Networking:

HAProxy, Keepalived,  
VPN (OpenVPN), Cisco IOS, JunOS,  
F5 BIG-IP, A10 Load Balancers,  
Cisco Technologies,  
Huawei Switches/Routers,  
HP Switches/Routers, Dell Switches

## LANGUAGES

Dutch Native language  
English Fluent

DEVELOPER / SENIOR SYSTEM ENGINEER

Worked in a highly secured environment with a focus on PKI, data encryption, and secure computing.

- Developed a PHP framework for internal development.
- Created custom dashboards and tools for internal use.
- Implemented complex automation projects with Ansible Tower.
- Managed more than 100 virtual servers on VMware/Red Hat platforms.

Red Hat

PHP

Python

Ansible Tower

GitLab

Satellite

SENIOR SYSTEM ENGINEER

Part of a compact engineering team responsible for shared hosting, VPS infrastructure, and a 5 PB offsite backup platform. Focused on high availability, automation, resilience, recoverability, and 24/7 operational continuity.

- Designed, built, and managed high-availability infrastructure with 99.995% uptime.
- Designed and built the 5 PB FreeBSD/ZFS-based Autobackup platform.
- Automated infrastructure and application deployments with Ansible.
- Implemented 24/7 monitoring, alerting, and operational tooling.
- Worked on scalable infrastructure with availability, recoverability, and manageability at its core.

SECURITY CONSULTANT

Performed security tests on websites, infrastructures, and applications using blackbox, graybox, and whitebox techniques. Conducted security workshops for colleagues and clients and resolved security incidents.

- Designed, implemented, and documented workshop VMs.
- Conducted security workshops.
- Performed blackbox/graybox/whitebox pentests.
- Resolved security incidents.
- Performed migration and maintenance of all Ultimum websites.

Kali Linux

Debian

Ubuntu

VMware vSphere

Ansible

DEVOPS ENGINEER / AUTOMATION SPECIALIST

Developed a central deployment platform for various virtualization technologies and in-house software products, based on Kickstart and Ansible. The platform enabled the entire virtualization platform to be deployed and managed at external locations.

- Designed, implemented, and documented virtualization environments.
- Set up and managed configuration management.
- Developed and rolled out software deployments.

LINUX ENGINEER

Jun 2016 – Sep 2016

Performed various Linux/Unix and Open Source tasks, including the management and migration of complex client platforms (Slackware 13, Keepalive, Zebra, OpenVPN, Amazon AWS). Had final responsibility for multiple migrations.

- Provisioned and managed servers and VMs.
- Provisioned Docker environments.
- Automated systems and performed hardening with Ansible.
- Migrated DNS and web servers to managed and hardened platforms.
- Set up VPN connections between networks.
- Migrated client infrastructures to AWS.
- Virtualized databases.
- Rolled out monitoring.

SYSTEM AND MONITORING ARCHITECT

Mar 2016 – Jun 2016

Developed a 24/7 monitoring platform for a large telecom supplier with central management of multiple locations. Automated the rollout of monitoring nodes and new checks while taking security requirements into account.

- Provided technical input for High Level and Detailed Level Design.
- Designed and implemented Linux monitoring servers.
- Automated the rollout of monitoring nodes and checks.
- Documented and provided technical consultation.

LINUX ENGINEER / DATABASE RECOVERY SPECIALIST

Dec 2015 – Mar 2016

Replaced a defective database platform and implemented a new PostgreSQL cluster on Hyper-V, critical to oncology research.

- Implemented Linux systems.
- Implemented and fine-tuned PostgreSQL.
- Documented and provided technical consultation.

Ubuntu 14

PostgreSQL

Hyper-V

FD Mediagroep B.V. (Seconded via Ultimum B.V.)

LINUX ENGINEER / NETWORK ENGINEER

Feb 2015 – Nov 2015

Managed Linux/Solaris systems, network equipment, storage systems, and related hardware/software. Phased out Solaris in favor of Linux, replaced storage and backup environments, and automated monitoring.

- Phased out the Solaris environment in favor of Linux.
- Renewed storage and backup solutions.
- Implemented a failover site.
- Automated with Ansible.

SENIOR SYSTEM ENGINEER

Feb 2014 – Feb 2015

Managed Linux, HP-UX, Solaris, and SunOS systems with a focus on high availability and load balancing. Developed HA solutions for 9292.nl, LDAP, and central logging.

- Set up HA load balancers with HAProxy, Keepalived, and Nginx.
- Implemented an HA LDAP system.
- Designed central logging with Logstash, Elasticsearch, Kibana, and Graphite.
- Provided daily management of servers and monitoring tools.

Jan 2012 – Dec 2012

News Service Europe B.V.

LINUX SYSTEM ADMINISTRATOR / SENIOR SYSTEM ENGINEER

Managed all Debian Linux systems and the Usenet platform based on them. News-Service Europe was among the global top three newsgroup providers. Provided 24/7 support and monitoring within a 7-person team. Co-responsible for system design, implementation, and maintenance of critical infrastructure.

Designed, implemented, and managed KVM clusters.

Designed, implemented, and managed Puppet configuration systems.

Maintained and troubleshot Linux/Unix servers.

Maintained custom Debian packages and mirrors.

Maintained Usenet clusters and storage platforms.

Maintained mail and web hosting clusters.

Implemented and managed Nagios monitoring.

Apr 2011 – Dec 2011

ACN Europe B.V. (Seconded via InWork B.V.)

LINUX SYSTEM ADMINISTRATOR / NETWORK ENGINEER

Responsible for all Linux OS systems and development of tooling based on open source software. Also acted as backup administrator for Windows environments, network administrator, and storage administrator.

Designed, implemented, and managed VMware clusters.

Designed, implemented, and managed Puppet configuration systems.

Designed, implemented, and managed Squid web filters.

Designed, implemented, converted, and migrated Exchange to Zimbra.

Implemented and managed Zabbix monitoring.

Backup network management (Juniper SRX240/EX4200, Cisco 9513/3650).

Backup Windows management (Windows 2003/2008, IIS 7, Exchange 2007).

Backup storage management (EMC CX3/4, EMC AX5).

Aug 2010 – Apr 2011

Leaseweb B.V.

SENIOR SYSTEM ENGINEER / INTERNAL IT

As the sole Linux Engineer, responsible for Linux and Unix infrastructure within one of Europe's largest hosting companies. Involved in the architecture, implementation, and management of internal and customer-facing platforms and business-critical services, with direct responsibility for continuity and technical decisions.

Designed and implemented virtualization, networking, DNS, mail, and web hosting platforms.

Designed and managed VMware, Cisco, and Juniper infrastructure.

Built and managed high-availability hosting and monitoring platforms.

Supported development teams with architecture and infrastructure challenges.

Was responsible for the continuity of business-critical internal services.
